

The Mugerwas

TIM & REBECCA

END-TO-END DEMO GUIDE

GUEST FLOW · ADMIN ACCESS · TROUBLESHOOTING

WEBSITE	https://the-mugerwas-wedding.online/
DATE	Saturday, 29 August 2026
VENUE	Speke Resort Munyonyo, Kampala, Uganda
ADMIN EMAIL	najunabrian@gmail.com

This document is for internal use only. Not for guest distribution.

PRODUCTION URLS

Live Site Reference

All pages of the site are live at the domain below. The dashboard URL is intentionally excluded from guest navigation — share it only with the wedding coordinator.

PAGE	URL	ACCESS
Home	https://the-mugerwas-wedding.online/	Public
RSVP	https://the-mugerwas-wedding.online/rsvp	Public
Details	https://the-mugerwas-wedding.online/details	Public
Dashboard	https://the-mugerwas-wedding.online/dashboard	Private

One-time setup required. The admin dashboard uses Supabase Auth. Before the admin steps work, the organiser account must exist in your Supabase project. See Part B (Admin Setup) on the next page for full instructions.

One-Time: Create the Admin User in Supabase

The dashboard authenticates via Supabase Auth (email + password). Complete these steps **once** before running the demo or handing over to the coordinator.

1 Open

Go to [Supabase Dashboard](#) → your project → **Authentication** → **Users**.

2 Create User

Click **Add user** → **Create new user**.

Email: `najunabrian@gmail.com`

Password: `Themugerwas`

Save. (If user already exists, reset the password via Supabase to match.)

3 URL Config

Go to **Authentication** → **URL Configuration**.

Add `https://the-mugerwas-wedding.online` to **Site URL** and **Redirect URLs** so sign-in from the live site succeeds.

Guest Flow Walkthrough

Walk a guest (or yourself) through the complete RSVP experience. Open a private/incognito window for a clean first-visit impression.

1

Open Home

Visit <https://the-mugerwas-wedding.online/>. Observe the preloader monogram, the welcome overlay, the countdown timer, and the ambient floating particles. Dismiss the overlay to continue.

2

Navigate to RSVP

Click **RSVP Now** in the hero or **RSVP** in the navigation. You land on <https://the-mugerwas-wedding.online/rsvp>. Notice the portal ring transition animation.

3

Complete the Form

Walk through all three steps:

Step 1 — Enter invitation code, full name, email.

Step 2 — Select attendance (Accept / Decline), seats, meal preference.

Step 3 — Add a song request and an optional message.

4

Confirmation

After submit, confirm the thank-you screen appears with the guest's name, a unique generative mandala, and (if attending) a gold confetti burst. The RSVP is now stored in Supabase.

5

Share

Return to <https://the-mugerwas-wedding.online/> and scroll to **Share Invitation**. Test the **Share on WhatsApp** button — it pre-composes a message with the RSVP link.

Admin / Dashboard Walkthrough

Open the dashboard directly at <https://the-mugerwas-wedding.online/dashboard>. This URL is not visible in guest navigation.

CREDENTIAL	VALUE
Organizer Email	najunabrian@gmail.com
Password	Themugerwas

1	Sign In Enter the credentials above and click Sign In . You should see the KPI cards: Total, Attending, Declined, Seats.
2	Review Table Scroll the guest table. Verify the RSVP submitted in Part A appears with the correct name, attendance status, seat count, and meal.
3	Search Type part of the guest name or email in the search field. The table should filter in real time.
4	Refresh Click Refresh to pull the latest rows from Supabase. The dashboard auto-refreshes every 30 seconds while you are logged in.
5	CSV Export Click CSV . A file named <code>the_mugerwas_rsups.csv</code> should download with all current RSVP data.
6	Edit a Row Click Edit on any row. A prompt appears for the meal field (demo behaviour). Save and confirm the table row updates immediately.
7	Logout Click Logout . You should return to the login form. Attempting to access protected data after logout should fail.

TROUBLESHOOTING

If Something Fails

Use the table below to diagnose common issues quickly.

SYMPTOM	WHAT TO CHECK
Dashboard login error	User exists in Supabase with this exact email. Password matches. Site URL and redirect URLs include your domain in Authentication → URL Configuration .
Empty table after login	RLS policy allows authenticated users to SELECT on rsvps . At least one RSVP has been submitted.
RSVP submit error	Supabase URL and anon key are set in config.js . RLS policy allows anon users to INSERT on rsvps (designed for open RSVP — no auth required from guests).
Invite code not found	The code must exist in the guest_invites table and have is_used = false . Check Supabase Table Editor.
Confirmation email not sent	confirmationEmailEndpoint is set in config.js and the endpoint is live. Check browser network tab for the POST request.

AFTER THE DEMO

- Change the admin password in **Supabase** → **Authentication** → **Users** if this document could be seen by others.
- Keep the dashboard accessible only via the direct **/dashboard** URL. Do not add it to guest navigation.
- Review RLS policies before going fully live — the current schema allows anonymous INSERT on RSVPs (intentional for open RSVP).
- Back up RSVP data regularly via the **CSV export** in the dashboard.
